Utah farmers and ranchers: time is running out to complete the 2017 Census of Agriculture
NASS conducting phone and in-person follow-up

SALT LAKE CITY, UTAH – April 25, 2018 – The U.S. Department of Agriculture’s (USDA) National Agricultural Statistics Service (NASS) is reminding Utah farmers and ranchers that the window is closing on the opportunity to participate in the 2017 Census of Agriculture. To date, NASS has received more than 1.5 million completed questionnaires, over 14,000 of which are from Utah. But both the national and Utah return rates are currently lower than at this point in the 2012 Census. NASS is encouraging Utah producers who have not returned their completed Census questionnaires to do so as soon as possible to avoid phone and in-person follow-up.

“NASS is grateful for the response from producers to date, but it is important that the others who received a Census questionnaire join their neighbors, colleagues, friends, and family in being part of the Census count,” said NASS Administrator Hubert Hamer.

“If you produced and sold \$1,000 or more of agricultural product in 2017, or normally would have produced and sold that much, we need to hear from you,” said Hamer. “If you’re a landowner who leases your land to a producer, we need to hear from you. If you received a census but do not fit this definition of a farm, please write your status on the form and send it back.”

Hamer noted that NASS has already begun to follow up with producers who have not yet completed the questionnaire.

“We sent the questionnaire to many potential farmers and ranchers who may not be familiar with it. The follow-up will give them and other producers the opportunity to ask questions,” said Hamer. “Some farmers and ranchers were waiting until they gathered their tax documents before completing the Census; having that information handy will certainly make filling out the questionnaire faster and easier.”

The Census of Agriculture is the only comprehensive source of agriculture data for every state and county in the nation. Census data are used by policymakers, trade associations, researchers, agribusinesses, educators, and many others. The information helps inform decisions on farm policy, rural development, and new farm technologies. It also aids in the creation and funding of loans and insurance programs and other forms of assistance, as well as in the cultivation of the next generation of farmers and ranchers.

The Census differs from other NASS surveys. It provides important demographic information and data on certain commodities, such as irrigated crops, vegetables, fruit, and horses that would not otherwise be available. Revisions to the questionnaire in 2017 include new queries about military veteran status, decision-making on the farm, and food marketing practices.

“We want the most accurate data we can get for Utah which means we need to hear from everyone who received a Census questionnaire,” said John Hilton, Utah State Statistician, Mountain Region.

Utah producers can respond to the 2017 Census of Agriculture online at www.agcounts.usda.gov or by mail. The same law, Title 7 USC 2204(g) Public Law 105-113, that requires response also requires NASS to keep all information confidential, to use the data only for statistical purposes, and to only publish in aggregate form to prevent disclosing the identity of any individual producer or farm operation. NASS will release Census results in February 2019.

For more information about the 2017 Census of Agriculture or for assistance with the questionnaire, visit www.agcensus.usda.gov or call toll-free (888) 424-7828.
